TITLE: Automation of processing of oscillograms produced during ship tests

SOURCE: IVUZ. Priborostroyeniye, v. 9, no. 4, 1966, 61-66

TOPIC TAGS: automation, oscillogram processing, ship test

ABSTRACT: A semiautomatic apparatus for processing the oscillograms produced as a result of an actual ship test is described. The apparatus comprises a tapetransport mechanism, a scale-multiplying mechanism, two switches, and a counter-registering device. A principal scheme of the apparatus is explained. The apparatus, claimed to be simple, reliable, and inexpensive, aids in

TEXT: A description is given of a portable instrument, replacing cumbersome seismoscopes in the analysis of soil systems and mountain rocks, where instruments for the analysis of concrete cannot be used. The instrument is based on the instrument ИКЛ-S (IKL-5) used for measuring cables and lines, with an increased output pulse power, increased input sensitivity and widened time range. The following features were introduced: Signal frequency shifts, synchronisation control, HT voltage regulation. The following were changed:

Action on Their Wall

Orig Pub

: Byul. eksperin. biol. i med., 1958, 46, No 7, 97-100

Abstract

It was shown that introduction of 20% solution of NaCl into the external wall of jugular vein of rabbit or application to the latter of crystals of NaCl induces proliferation of its tunica interna. The majority of proliferations are columns of endothelial cells which in some cases had a connective tissular base. The formation of such columns was followed. Multiple mitoses in endothelium are regarded as appearances of biologic reaction to chemical irritation. -- L.M. Gershteyn

TITLE:

Changes Taking Place in Neurons Under the Action of Ionizing

Radiation

PERIODICAL:

Doklady Akademii nauk SSSR, 1960, Vol 131, Nr 5, pp 1171 - 1173

(USSR)

TEXT: The author studied the dynamics of the above changes on the nodes of the symphathetic chain and on the thoracic segments of the spinal cord together with the corresponding spinal ganglia in the case of 15 male dogs, at various stages of the experimentally caused radiation sickness. The dogs were wholly irradiated simultaneously from both sides. The dosage was 6.3 r/min, the dose, measured in air, was 500 r corresponding to about LD 50/30° The animals were

killed on the 2nd to 28th day after irradiation. They suffered from an acute radiation sickness of the second and third degree. The culmination of the disease occurred on the 10th to 21st day. The above-mentioned parts of the nervous system were fixed, and after preparing with Celloidin they were colored on vous and examined (Figs 1-3). On the basis of observations the author found that in the case of acute radiation sickness in the nerve cells of the vasoreflex arc considerable changes take place in the distribution and amount of Nissl granules.

Card 1/3

Changes Taking Place in Neurons Under the Action of S/020/60/131/05/054/069

B011/E014

The latter are known to indicate the functional state of the neuron. The abovementioned changes are most distinctly marked during the culmination of the
sickness. The author emphasizes that the dying of nerve cells takes place in
two stages of the radiation sickness: during the first days after irradiation
and toward the end of its culmination or at the beginning of the decline. The
neurons obviously perish in the first period due to a direct effect of the
penetrating rays, whereas in the second stage they die due to a permanent efpenetrating rays, whereas in the second stage they die due to a permanent efpenetrating rays, whereas in the nervous system prove the sensitivity. The morfect of irradiation and due to disturbances of the vascular activity. The morphological changes observed in the nervous system prove the sensitivity of
neurons to ionizing radiation. They are in full agreement with data of publicaneurons and offer a further supplementation. The damages of neurons of the
vasoreflex are have to be taken into consideration both in the entire pathogenesis of the radiation sickness and within the hemorrhagic syndrome. Mention
is made of A. L. Shabadash and Academician A. A. Zavarzin. There are 2 figures
and 28 references, 16 of which are Soviet.

TITLE

Tables of the Airy functions and of special degenerated hypergeometric functions for the asymptotic solution of differential

equations of second order.

PERIODICAL

Moscow: Academy of Sciences of the USSR, Computation Center, 262 pages (1955).

reviewed 1/1957

Let $U_1(s, \propto)$ and $U_2(s, \alpha)$ be the solutions of the generalized Airy differential equation $U''(s)+s^{\alpha}$ U(s)=0 with $U_1(0,\alpha)=1$, $U_1'(0,\alpha)=0$ and $U_2(0,\alpha)=0$, $U_2'(0,\alpha)=1$. The case $\alpha=1$ is the ordinary Airy differential equation. Let $V_1(s,p_0)$ and $V_2(s,p_0)$ be the solutions of the degenerated hypergeometric differential equation $V''(s)+((p_0/2)(1-p_0/2)s^{-2}+s^{-1})V(s)=0$ with $V_1(0,p_0)=1$, $V_1'(0,p_0)=0$ and $V_2(0,p_0)=0$, $V_2'(0,p_0)=1$. The solutions of these equations are related with problems which occur during the investigation of the stability of motions, in the theory of the propagation of radio waves, in the gas dynamics and in other theories. Furthermore, the asymptotic behavior of the solutions of certain ordinary differential equations of second order can be investigated by aid of these functions.— After a collection of the properties of the functions $U_1(s,\alpha)$ and $V_1(s,p_0)$ (series expansions, asymptotic expansions,

relations with Bessel functions) and after a graphical representation the following functions are tabulated:

1) $U_1(s,1)$, $U_2(s,1)$, $U_1(s,1)$, $U_2(s,1)$ for $-6 \le s \le 10$.

2) The integrals

$$V_{11}(s) = \int_{0}^{8} (U_{1}^{2}(s,1) - \sqrt[3]{3} \Gamma^{2}(2/3)/2\pi \sqrt{s}) ds, \quad V_{12}(s) = \int_{0}^{8} (U_{1}(s,1)U_{2}(s,1) - 1/2\sqrt[3]{s}) ds,$$

$$V_{22}(s) = 1 + \int_{0}^{8} (U_{2}^{2}(s,1) - \Gamma^{2}(1/3)/2 \sqrt[3]{3} \pi \sqrt{s}) ds \quad \text{for } 0 \le s \le 10.$$

3)
$$U_1(s, \alpha)$$
, $U_2(s, \alpha)$, $U_1(s, \alpha)$ $U_2(s, \alpha)$ for $\alpha = 1/4$, $1/3$, $1/2$, $2/3$, $3/4$, $5/4$, $4/3$, $3/2$, $5/3$, $7/4$, 2 ; $-1/4$, $-1/3$, $-1/2$, $-2/3$. $-3/4$ and for $0 \le s \le 6$.

4)
$$V_1(s, p_0)$$
, $V_2(s, p_0)$, $V_1(s, p_0)$, $V_2(s, p_0)$ for $p_0 = 0, 1; 0, 2; ...; 1, 0$ and $0 \le s \le 10$.

The step width in all cases is $\Delta s = 0.01$. The values of the functions are given with 4, partially with 5 decimals. Furthermore the first 5 zeros s_1, \dots, s_5 of the functions $V_1(s,p_0)$ and $V_2(s,p_0)$ for $p_0=0.1$; 0.2; ...; 1.0 are given. The arrangement of the tables is clear, the print is good.

Operational Experience With Electronic Computers

PERIODICAL:

V sb.: Mekhaniz, ucheta i vychisl. rabot, Moscow-Leningrad, Mashgiz,

1958, pp 76 - 85

ABSTRACT:

A description is given of the layout and design of the EV-80-30 electronic computer - a computing-perforating machine with a program, set in advance, carrying out four arithmetic operations (with a special program also the evolution of square roots). The methods of solving problems of linear algebra and differential equations with the EB-80-3 are analyzed in detail. The insufficient capacity of the memory units of the EV is emphasized.

Sovremennyye matematicheskiy mashiny (Modern Computers) Moscow, Fizmatgiz, 1959. 111 p. Errata slip inserted. 35,000 copies printed.

Ed.: Yu.M. Bezborodov; Tech. Ed.: 8.S. Gavrilov.

FURPOSE: This book is intended for the general reader and students in upper secondary school grades.

COVERAGE: The book describes, in popular language, the operating principles and physical foundations of the various units of mathematical models and electronic digital computers and also discusses the use of computers in the Soviet economy, and the science of cybernetics and its problems. The book mentions that the BESM computer was developed under the leadership of S.A. Lebedev, Academy of Sciences USSR, the "Strela" under Yu.Ya. Vasilevskiy, the "Ural" under B.I. Rangeyev, the M-2 and M-3 under I.S. Bruka, Corresponding Member of the Academy of Sciences USSR, the IPT, MN, EMU, and EI by B.V. Ushakov, L.I. Gutenmakher, G.M. Petrov, I.M. Vittenberg, B.Ya. Kogan and other Soviet scientists. There are no references.

TITLE: Utilizing "Dnepr" computer in a data processing system

SOURCE: Ref. zh. Matematika. Abs. 6V370

REF SOURCE: Sb. Upravlyayushchiye mashiny i sistemy. Vyp. 2. Kiyev, 1965, 14-23

TOPIC TAGS: data processing system, computer input unit, computer output unit

ABSTRACT: Successful utilization of a data processing system is reported. In this system, the raw data coming from several measuring units is entered on perforated tape. Six measurement readings are received each second, each reading contains up to 500 bits of information, and a group of readings contains up to 400 words which may be processed in 10 minutes. The data from the perforated tape to the "Dnepr" computer and back is transmitted over channels of a telephone line 200—1000 m long. The computer output is also on perforated tape facilitating repeated processing of material. The computer input accepts data from a magnetic tape and communication channels while its output may be delivered on a high-speed printer. Additional operations are included in the computer system instruction reportoire. [Translation of abstract] 1 illustration and 1 table. V. Sh.
